Project details

Principal Contractor: WISDOM HOMES

Domestic & Commercial Roof Tiling

Project:

Job Address:

ALL WISDOM HOMES SITES

Job Description: Roof Tiling (Classified - HIGH RISK ACTIVITY) - INCLUDES Roof Maintenance

Activity: Roofing Works - Installation of battens, roof tiles, accessories and ancillary items where roof pitch is no greater than 35 degrees and rafters

(trusses) are at maximum of 600mm centres.

This SWMSEA has been developed in consultation with:

ALL PERSONS INVOLVED IN TASK MUST HAVE THIS SWMSEA COMMUNICATED TO THEM PRIOR TO WORK COMMENCING

Authorised by: Mark Wallace

Five Star Quality Roofing Pty Ltd Date: 14^h April 2016

Page 1 - Version 4.1

- Regular inspections and observations will be conducted by FIVE STAR QUALITY ROOFING to ensure SWMSEA is being complied with.
- Tool Box Talks will be undertaken to identify, control and communicate additional site hazards
- Work must cease immediately if incident or near miss occurs
- SWMSEA must be amended in consultation with relevant persons.
- Amendments must be approved by the Supervisor and communicated to all affected workers before work resumes

Personal Protective Equipment

F	Non-Slip Foot Protection
	Hearing Protection (where req.)
	High Visibility Clothing
Per X	Head Protection (Hard Hat/Sun Hat)
	Eye Protection (Safety/UV)

- Refer to supplier handover certificate
- and visually checked prior to use. All electrical tools & leads to be within current test & tagged period
- Ensure all equipment (plant and machinery, tools etc) are all maintained as per manufacturer's instructions and undergo regular preventive maintenance as required.
- Missing parts or guards must be in place before use
- Old equipment with excess wear & tear may be unsafe
- to be in a safe operating condition. Use only plant and equipment that has been checked and inspected

Method of identifying, assessing and prioritising risks

manage the risks identified. For each potential hazard identified a risk level will be determined by referring to the Risk Matrix below. The Hierarchy of Control will be used to

Step 1 Determine Likelihood – What is the possibility that the effect will occur?

Step 2 Determine Consequence - What will be the expected effect?

Step 3 Determine the risk level

Step 4 Hazard Elimination or Risk Control

Risk Matrix			Step 1: Likelihood		
Step 2: Consequences	Certain to occur	Very Likely	Possible	Unlikely	Rare
Fatality					
Permanent disability					
Lost time injury					
Medical treatment injury					
First aid injury			Control of the Contro		Will folly the fight of the contract of the co

Hazard Elimination and Risk Control

The risk levels are ranked from highest to lowest using the following control measures.

Authorised by: Mark Wallace Signature:

Control measures should be considered and implemented in the following order with Level 1 the highest level of protection and level 3 the lowest:

Risk	Preference of Control		Hierarchy of Control		Example of Control Measures to implement
Rating Level			1		
Level 1	Highest level of	•	Eliminate the hazard		The most effective control involves elimination the hazard and
	protection				associated risk. e.g. eliminating the risk of fall form height by working
					from the ground
Level 2	Acceptable level of	•	Substitute the hazard with		Use a different, less dangerous piece of equipment or replace
	protection if Level 1 is		a safer option		chemicals with safer materials.
	not reasonably	0	Isolate the hazard from	•	Separate noisy equipment by soundproofing or install guard rails to
	practicable		people		exposed edges and hole in floors
		•	Reduce the risk through	•	Add machine guarding or use trolleys or hoists to move heavy loads
			engineering controls		
Level 3	Lowest level of		Reduce exposure to the	•	Establish work methods or safe work procedures for tasks or erect
	protection and should		hazard using administrative		signage to warn people of the hazard
	only be used as a last		actions		
	resort or in conjunction	•	Use personal protective	0	Limit the exposure to the hazard by implementing face masks,
	with other levels of		equipment		gloves, protective eyewear, UV protection and train people in their
	control		,		use.

Accident Management &	Incident		Safety Data Sheets			Safe Work Procedures		Procedure (in steps):

RB = Risk Rating before controls implemented - RA = Risk Rating after controls are implemented

L1 • Where works involve walking or carrying over an existing

roof, check for fragile or brittle roof surface and control any identified risks. Temp walkways, planks, elevated work platform, wire mesh etc. where required.

Assess weather conditions i.e. excess heat or cold, wind, rain, frost and/or dew and take appropriate precautions which may include re-schedule of work date, additional protective

Special Care must be taken where:

- Increased risk factors due to "other" conditions i.e. fully glazed and/or flat profile tile and/or surface moisture, oil, dust or other conditions that may make the roof slippery
 - Increased risk of falling objects
 - Increased risk of falling from or through roof

- Work at a slower pace; use cutting trays when cutting tiles to prevent slips due to debris on the roof; carry half buckets mortar etc.
- Ensure that others are not working underneath.
- Ensure weather conditions are assessed prior to starting
- Roof ladder may be considered if safe to do so.

SAFE WORK METHOD STATEMENT & ENVIRONMENTAL ANALYSIS – Part 2 Additional Hazards Identified on this site

ROOF WAINTENANCE Ascending Roof Product to the Roof	ROOF MAINTENANCE Working in Roof Cavity		ROOF MAINTENANCE USE OF SAFETY HARNESS	Procedure (in steps):
	0 0 0			ш
Fall from Ladder Material Dropping	Fall through Ceiling Heat Exhaustion Electrical Wires Confined Space		NOTE: RB = Risk Rating Fall from or through roof Slippery surface Sharp edges Electrical Wires	Possible Safety or Environmental Hazards
Ξ	7		L1	70 S
			ontro	2
Make certain all Safety Precautions are catered for. Utilize Best Practice to move tiles to the roof Avoid heavy humping of tiles Avoid difficult body twists Never ascend ladders carrying material without complete control of contact to the ladder Where Roof Pully systems are used make certain correct fixtures are in place prior to using.	Make certain you transverse across ceiling timbers and or purpose placed boards – do not step on any gyprock sheets. Make certain that you are only in the cavity for a short inspection and if longer periods are required have ventilation areas open (tiles pushed up) If entering roof cavities always turn of the mains power. Have emergency worker above in open surface where communication can be heard between internal and external workers.	Accent Roof directly above Ladder in Straight Line Uplift Tile and fix Harness to Roof Truss Inspect Surrounds and make certain harness rope will catch worker by keeping a short lock hold in place Use correct manual handling techniques for lifting Ensure weather conditions are assessed prior to starting Make Certain all Live Power is greater than 5 Lm away Have emergency worker within communication distance as so communication can be heard between internal and external workers.	NOTE: RB = Risk Rating before controls implemented - RA = Risk Rating after controls are implemented. from or through roof L1 Complete JSA Risk Assessment of project Inspect Harness for signs of damage (Stop Job if Damaged) pedges Confirm all workers have High Safety Training Frical Wires Erect Ladder 4 – 1 Ratio – Secure Ladder to Roof.	RB Control Measures to Reduce risk

SAFE WORK METHOD STATEMENT & ENVIRONMENTAL ANALYSIS - Part 3

Personal Qualifications and	Duties and Responsibilities of those	Training Required to Complete the Work:
Experience required for the job:	employees undertaking the task:	(All employees must be trained in relevant procedures.)
 White Card 	 White Card – all employees on site 	Nature of the hazards
 Working at heights Certificate 	 First aid 	Site-specific inductions.
 First Aid 	 Conformance with SWMSEA and project 	Training in this SSWMSEAEA
Roof Tiling Licence	site rules	First Aid
,	 Compliance with WHS Legislation 	Emergency Response

EMPLOYEES Sign-off

This SVMMSEA has been developed through consultation with employees (workers). I have read the above SWMSEA and I understand its content. I confirm that I have the skills and training, including relevant certification to conduct the task as described. I agree to comply with safety requirements within this SVMMSEA including safe work instructions and Personal Protective Equipment described. These workers understand that they must stop work if they are unable to comply with the SVMMSEA or if they consider a situation to be unsafe to either themselves or others that could be effected by this work.
